EDUCATION

Université Paris-Saclay

MS Mathematics and Artificial Intelligence

Orsay, France

Sept. 2025 – 2026

Courses: Deep Learning, Machine Learning, Optimization, Statistical Modeling, Supervised & Unsupervised Learning, Probability, Databases

Aix-Marseille Université

BS Advanced Mathematics

Marseille, France

Sept. 2022 – May 2025

Courses: Linear Algebra, Inferential Statistics, Probability Theory, Measure Theory, Analysis, Differential Calculus, Programming (Python, R, Java)

EXPERIENCE

Safran Tech

AI Research Intern (Gap Year)

Magny-les-Hameaux, France

Sept. 2026 – Mar. 2027

- Research data selection for self-supervised vision with Masked Autoencoders (MAE), aiming to reduce pre-training cost for non-destructive testing and autonomous systems.
- Develop dynamic subset selection combining embedding-based clustering and reconstruction-loss sampling to balance data coverage and learning difficulty during pre-training.

Morphism.co

AI Research Intern

Paris, France

Apr. 2026 – Aug. 2026

- Design and train GNN-based classifiers on interaction graphs from live Bluesky firehose data, combined with transformer-based embeddings (RoBERTa) for post content, to detect inauthentic accounts and limit bot virality.
- Read and implement state-of-the-art research on graph representation learning and transformer-based NLP to model information diffusion and superspreader behavior in decentralized social networks.

PROJECTS

FiLM: Visual Reasoning with Feature-wise Linear Modulation 🔗

PyTorch · Streamlit · VQA

Jan. 2026 – Mar. 2026

- Reproduced the full FiLM architecture (Perez et al., 2017) in PyTorch, FiLM generator and residual blocks with γ/β modulation, reaching 94% accuracy on Sort-of-CLEVR and 51% on CLEVR VQA (40k iterations, constrained hidden dim).
- Extended the conditioning mechanism to neural style transfer via Conditional Instance Normalization (Ghiasi et al., 2017), applying FiLM-style modulation across 6 artistic styles.

Facial Emotion Recognition 🔗

PyTorch · OpenCV · Computer Vision

Sept. 2025 – Oct. 2025

- Designed and trained a custom VGG-style CNN from scratch in PyTorch, BatchNorm, progressive Dropout and data augmentation, reaching 73% accuracy on facial expression classification with a real-time OpenCV inference pipeline.

SKILLS

Languages: Python, SQL, R, Java, $\text{\LaTeX}$

ML & Tools: PyTorch, Scikit-learn, OpenCV, MySQL, MongoDB, Streamlit, Git

LANGUAGES

French (Native)

English (Professional proficiency)
